June 16, 2008

## Abstract

In this paper I will demonstrate my mastery of Latex. It is not too hard, but yet not too easy.

## 1 My Background

In this section of my homework paper, I will make a table with some information about me.

Name	Hometown	Major	Year
Travis Damaso	Ewa Beach	Electrical Engineering	2010

## 2 Some Math

In this section I will show an *inline* equation like this one ( $A = \pi r^2$ ), the area of a circle.

Then I show a `displaystyle` equation.

$$\int_0^{\infty} \frac{1}{1+x^2} dx = \frac{\pi}{2}$$

I will now display a matrix:

$$A = \begin{bmatrix} a & b & 3y \\ -b & a & -c \\ -3y & c & a \end{bmatrix}$$

And finally a multiline equation

$$\begin{aligned}\int_0^{\pi/2} \cos(x) &= \sin(x)|_0^{\pi} \\ &= \sin\left(\frac{\pi}{2}\right) - \sin(0) \\ &= 1 - 0 = 1\end{aligned}$$

### 3 A Figure

Figure 1: This is my figure: a plot of the fourth root function in the complex plane.

Adding figures to documents is essential for presenting scientific results.

I will include a figure in my document

(You will need to make a figure with gnuplot of anything you like to include here. Here's your chance to impress your professor with a cool graph.)

### 4 Conclusions

As you can see, I know Latex pretty darn well!
