Sources of help for Math 053 Calculus II.

Fall 2008

If you need help solving problems related to this course or if you need help reviewing material of previous courses we have a couple of sources to help you. As I mentioned you can come to my office hours or make an appointment with me.

Remember: I will have special office hours on Wednesday 19 and Thursday 20 from 2:00pm to 3:00pm. If you can’t make it to any of these or my regular office hours you can make a special appointment with me by email at smarotta@pacific.edu. My office is 103 E, Department of Mathematics in the Classroom Building.

If you are an engineer, you can also see Professor Gary Martin, the Associate Dean of the Department of Engineering and Computer Science. His email address is gmartin@pacific.edu.

For other students, you can go to the Math Resource Center on the 2nd Floor of Banister Hall. They usually have students that can help with Calculus after 3:30 pm. Also, you can sign up for one on one tutoring in the Education Resource Center on the 1st Floor of Banister Hall.

Also, you could go to the study area of the Department of Mathematics (Classroom Building 103) and see if some of the other faculty are around to answer questions. Don’t be afraid to ask since you may get your questions answered and also, you may get to know some good professors.

Best,

Sebastian
